

*****READ ME*****

Step1: create database in mysql in the name of "**projectdb**"

Step2: deploy the project

Step3: Login to the web application

Username: admin

password: admin

Post login

Step4: change the following in hibernate.cfg.xml in project src\main folder

from: <property name="hbm2ddl.auto">**create**</property>

to: <property name="hbm2ddl.auto">**update**</property>

NOTE: create value will create the database however will drop the same once refreshed

update value will makes changes to the existing database tables however will not create tables in Dynamic web project(as per Hibernate team from google)

Step 5: add student details, teacher details, class and subject details to view all the data tables
